

# Homologation and TYPE APPROVAL

---

DOCUMENTATION • ADVICE • SUPPORT • RESEARCH

---

- Documentation preparation & submission
- Clarification & interpretation
- Compliance status assessed
- Future legislation & impact
- VCA Type Approval Engineer on-site

Millbrook offers a full Type Approval service, our long-standing test capabilities being complemented by experienced certification specialists.

Millbrook is recognised by the UK Vehicle Certification Agency, and authorities in many other countries, as a test site for worldwide Type Approval and Certification.

Changes to type approval processes for trucks and buses, including body builders, means many organisations are exposed to type approval for the first time. Millbrook is here to help.

As a basic requirement, the client provides the necessary vehicles, parts, and specifications, as identified by Millbrook, who in turn furnish all the necessary expertise and test resources to obtain Type Approval.

If required, Millbrook can act as the manufacturer's representative, thus relieving the client of the need to attend the various technical meetings associated with the Type Approval process.

Where manufacturers have sufficient in-house capacity to undertake some of the functions detailed previously, Millbrook will act in partnership with the client to meet their additional needs.

As well as offering a full type approval and homologation support service, we can manage all witnessed test programmes. This means that all of the administration of organising test slots and witnessing authorities are taken care of by us leaving you to concentrate on other things – a true "One-Stop-Shop" for all your vehicle testing and type approval needs. The level of support will be tailored to your needs.

## On-site VCA Presence

A VCA Type Approval Engineer is based on the Millbrook site allowing fast booking for witnessed tests with preferential access given to Millbrook managed test programmes.

# Millbrook OVERVIEW

---

Millbrook is one of Europe's leading locations for the development and demonstration of every type of land vehicle, from motorcycles and passenger cars to heavy commercial, military and off-road vehicles. Located at the geographical centre of the UK automotive and fuels industry and situated centrally in the strategic Oxford to Cambridge Arc just 65 kilometres to the north of London, our custom-built facility provides virtually every test, validation and homologation service necessary for today's demanding programmes, complemented by a worldwide reputation for confidentiality, service and competitiveness.

Although significant work has been done commercially on behalf of many research organisations, Millbrook has always focused on real world applications and understand the constraints, limitations and budgetary controls that affect our customers. Our staff have experience and expertise from backgrounds in test work within vehicle manufacturers' engineering departments, so they know what their customers expect from a test. Putting working relationships first, and seeing things from the customer's point of view, means Millbrook's support will survive the test of time.
